October 3, 2017

To the Chief Executive Officers of Comcast Corporation, Sony Corporation, Time Warner Inc., Twenty-First Century Fox Inc., and Viacom Inc.

Re: Investor Statement on Tobacco Depictions in Movies

The undersigned investors (collectively representing more than $64 billion in assets under management) are writing to urge your company to eliminate tobacco depictions in youth-rated movies. We believe this is warranted to protect the company’s reputation and consumer base and to avoid legal liabilities. As investors we are concerned by the reputational and potential financial risks due to the company being associated with this public health issue.

Scientific Consensus of Harm

Smoking tobacco is the leading cause of preventable death in the United States, killing an estimated 443,000 Americans each year. One billion lives are at stake in the battle against tobacco addiction worldwide in this century, and the World Health Organization describes it as the most devastating, but preventable, epidemic of our time.

According to the landmark U.S. Surgeon General report in 2012, smoking in movies accounts for about 44% of all new smokers. The report concluded that an R-rating for future movies depicting smoking would be expected to reduce the number of teen smokers in the U.S. by nearly 18%. This reduction would prevent one million smoking-related deaths among American youth alive today.

The Centers for Disease Control and Prevention and the World Health Organization support the Surgeon General’s recommendation. In August 2017, 17 leading U.S. health organizations (including American Cancer Society and medical organizations representing more than 630,000 doctors) published an open letter demanding that movie producers, distributors, and exhibitors apply an R-rating to all films that include depictions of smoking or tobacco.

---

1 Youth-ratings are G, PG, and PG-13. For more information see: www.mpaa.org/film-ratings/
4 Ibid.
6 Ibid.
Thirty-eight State Attorneys General also acted on the Surgeon General’s report by writing to the major studios urging elimination of tobacco depictions in youth-rated movies: “Given the scientific evidence... the [movie] industry cannot justify failing to eliminate smoking from youth-rated movies... each time the industry releases another movie that depicts smoking, it does so with the full knowledge of the harm it will bring children who watch it.”

Article 13 of the World Health Organization (WHO) Framework Convention on Tobacco Control, the world’s first global health treaty, to which 180 nations and territories are now parties, calls for strong national measures to end exposure of children and adolescents to tobacco promotion in entertainment media.

The United Nations Sustainable Development Goals (SDG) also provide an incentive for media companies to address tobacco depictions in movies. The SDGs were created in 2015 by 190 world leaders to protect human health, end poverty, protect the planet, and ensure prosperity for all. The U.S. Council for International Business notes that the SDGs create “a tremendous opportunity for the private sector to demonstrate the central role it plays in sustainable development and human prosperity”. SDG Goal 3 is: “To ensure healthy lives and promote well-being for all at all ages.”

Currents Policies Are Inadequate to Protect Youth

By 2013, all major movie studios or their parent companies had adopted individual tobacco depiction policies which discourage, but do not formally eliminate, smoking in their youth-rated movies (see chart below). Sizeable loopholes in these policies, such as

---

11 UN SDG Goal 3 Targets: [https://sustainabledevelopment.un.org/sdgs](https://sustainabledevelopment.un.org/sdgs)
12 “Major” studios refers to the members of the Motion Picture Association of America (MPAA)
allowing smoking for “creative” reasons, have prevented smoking incidents in PG-13 films from falling below the low, industry-wide levels seen in 2010.16

Disney, which leads the industry in reducing tobacco impressions, strengthened its policy in 2015 to “prohibit smoking in movies across the board [in] Marvel, Lucas, Pixar [and] Disney films.” Even Disney’s policy is not comprehensive; it still allows smoking in movies distributed under its Touchstone label, most recently used to market DreamWorks productions.

Among the major studios, Sony ranks as the most dangerous to youth: 44 percent of Sony’s youth-rated movies from 2013 to 2016 feature smoking. Lionsgate follows with 41 percent of youth-rated movies showing tobacco use. By comparison, Disney and Disney-owned labels showed tobacco use in 12% of their movies (across all ratings) over the past five years. All other major studios featured tobacco in 28-38% of their movies in that timeframe — at least double that of Disney.

* Disney’s policy also allows portrayals of "smoking in an unfavorable light or [that] emphasize the negative consequences" as well as “scenes that depict a historical figure who may have smoked at the time of his or her life.” These exceptions in Disney’s policy are consistent with recommendations from health authorities.

**Recommendations**

Failure to address the public health impacts of tobacco depictions damages the company’s brand and reputation and opens the door to potential litigation. It also risks the future value of the company’s film properties in the international marketplace.

To prevent the recruitment of millions of new smokers, and the associated and growing risk of such an outcome, we recommend the following actions:

1. Stipulate in all production agreements that there should be no tobacco imagery in any film intended to be youth-rated, with the possible exception of a film that (i) depicts the tobacco use of an actual historical person (as in a documentary or a biographical drama) or (ii) accurately portrays the serious health consequences of tobacco use;

2. Stipulate in distribution and licensing agreements that exhibition of any film with tobacco imagery will be preceded by a strong anti-tobacco spot announcement, in all media and in all distribution territories;

3. Require each credited producer of a film depicting tobacco imagery to file affidavits stating that nobody associated with the film production entered into any agreement, direct or indirect, written or verbal, relating to the representation of tobacco in the film;

4. Stipulate in all production agreements that the finished film shall not include any tobacco product brand or facsimile; and

5. As a member of the governing board of the Motion Picture Association of America (MPAA), explicitly support updating the rating and advertising standards and guidelines of the MPAA to assign an R-rating to any film with tobacco imagery submitted for classification after **June 1, 2018 (with the possible exceptions stated in #1)**.

We appreciate your attention to this important issue and hope to meet with to further discuss how to end the risk associated with continuing to allow smoking in youth-rated movies.

Sincerely,

As You Sow
